

VITAL STATISTICS

**STATE OF
MISSOURI**

1951

JEFFERSON CITY, MISSOURI

The Department of Public Health and Welfare of Missouri

DIVISION OF HEALTH

Bureau of Vital Statistics

This report is the third in the new series and in the new format. As indicated in the 1949 report, these tables are being published at this late date so as to keep a continuous comparative series available for the analysts of the future.

Each year efforts are expended to improve both the quantity and the quality of vital records reporting. The success of this program is measured by the gradual elimination of the small registration districts, the increased use of vital records in local health activities, the increase in demand for data from social agencies, schools of public health and sociology departments of universities, the greater quantity of promptly filed vital records, and the increasing number of records carrying full information for every item.

Whereas reporting of live births and deaths is generally quite complete (about 98% for each), such is certainly not the case for stillbirths, marriages and divorces. Stillbirths (children born dead after 20th week of gestation) are probably about 50% filed; marriages and divorces about 85% filed.

The detailed comparative summary similar to that in the 1950 report is prepared again on a biennial basis. It will appear in the 1952 report.

August 1954
